

What is a Shotblocker?

A small tool that reduces the sensation of pain from injections. Use again and again to reduce pain and anxiety from shots!

1

Choose the injection site.

2

Press ShotBlocker® firmly around the injection site to create the necessary sensation.

3

Administer the shot through the opening.

**Best results achieved for children ages 4 and up.*

About the Vaccine Education Initiative

The Autism Society of Greater New Orleans is participating in the Vaccine Education Initiative, a public health model focused on increasing vaccine confidence and access for the Autism and Disability communities.

Additional resources include informational flyers, social stories, symbol communication boards, and visual schedules and can be accessed for free by scanning the QR code:
